Dear Hillcrest Committee Members,

Thanks for your generous support to our cancer research pilot project.

Cancer is one of leading causes of death. Modern cancer research is built upon massive data sets generated by experimental biologists with the indispensable usage of various computational approaches.

Your support makes it possible to put together two groups having completely different directions in cancer research: Dr. Wu's group focusing on developing computational approaches to unravel patterns buried in huge experimental data, and Dr. Wong's group working on developing innovative experimental methods by generating large scale data sets.

With your support, we will join our efforts to build advanced computational tools to understand the mechanisms of cancer development, assisting clinicals to diagnose cancers in the early stages, and developing more efficient cancer therapies for individual patients.

We are deeply grateful for your support to our research and hope to share exciting results with you in the near future.

Yours sincerely,

A handwritten signature in black ink that reads "Guanming Wu".
